CAUTIONARY STATEMENTS

Cautionary Statement Regarding Forward-Looking Information

This presentation contains forward-looking information and forward-looking statements (collectively, "**forward-looking statements**") within the meaning of applicable securities laws. All statements, other than statements of historical fact, are forward-looking statements and are based on expectations, estimates and projections as of the date hereof. Statements with respect to predictions, expectations, plans, projections, future events or performance, often but not always using words such as "develop", "growth", "believe", "expect", "potential", "intend", "should", "could", "seek", "anticipate", "will", "positioned", "project", "risk", "plan", "may", "can", "might", "estimate", "interpreted", "significant", "forecast", or, in each case, their negative and words of similar meaning are not statements of historical fact – rather, they are forward-looking statements. In this presentation, forward-looking statements relate to, among other things, statements regarding the future plans and objectives of Magna Mining Inc. (the "**Company**" or "**Magna**"), production plans and cash flows relating to the McCreedy West Mine, the commencement or start of mining or development at the Company's other assets, such as the Levack Mine or the Crean Hill Project, the exploration or development potential of the Company's assets to grow the Company into a meaningful mid-tier producer with multiple producing assets, mineral resource or mineral reserve estimates and the resource or reserve potential of the Company's assets, the prospects generally of the Company's assets, such as the Levack Mine, the Crean Hill Project, the Podolsky Mine and the Kirkwood Project, estimates of reclamation liabilities, estimates of future metal prices, anticipated future revenue streams and potential sources of additional financing, and the integration of assets acquired by the Company in corporate or asset transactions.

All forward-looking statements involve various assumptions, estimates, risks and uncertainties and actual results may differ materially from those communicated in such statements. These risks and uncertainties include, but are not limited to, risks and uncertainties relating to the ability of the Company to successfully operate mining operations and develop development projects, the ability of the Company to complete further exploration projects, such as drilling programs and assaying, the security of the Company's interest in and title to its properties; the potential of exploration activities and assay results to accurately predict mineralization, errors in management's geological and financial modeling, the ability of the Company to maintain all current permits, authorizations and mineral tenure in good standing, the ability of the Company to obtain and maintain necessary government approvals, the ability of the Company to complete further accretive transactions, the ability of the Company to successfully execute on its production, development and exploration plans, the ability of the Company to attract and retain qualified talent to successfully execute on its strategy, changing legislative and regulatory environments, the impact of competition, the timing and amount of required capital and other expenditures to advance its operations and projects, conditions in financial markets and the economy generally, the ability of the Company to obtain additional financing on satisfactory terms, if at all, the ability of management of the Company to operate and grow the business effectively, fluctuations in metal prices, the speculative nature of mining and mineral exploration and development, as well as those risk factors discussed or referred to in the Company's continuous disclosure filings with the securities regulatory authorities in Canada available on SEDAR+ at www.sedarplus.ca, including in its management discussion and analysis for the year ended December 31, 2024.

Scientific and Technical Information

The scientific and technical information contained in this presentation has been reviewed and approved by David King, M.Sc, P.Geo, a "Qualified Person" for the purposes of National Instrument 43-101 – *Standards of Disclosure for Mineral Projects* ("**NI 43-101**").

Currency

All amounts discussed herein are denominated in Canadian dollars unless otherwise specified.

THE SUDBURY ADVANTAGE

OVER 100 YEARS OF MINING

INFRASTRUCTURE & PROCESSING FACILITIES

SOCIAL LICENSE TO OPERATE

LOCAL, PROVINCIAL & FEDERAL GOVERNMENT SUPPORT

WORLD CLASS MINERAL ENDOWMENT

MAGNA MINING – PILLARS OF GROWTH

PRODUCTION

- Currently one producing copper mine (McCreedy West)
- Four permitted, past producing mines
- Focused on copper and precious metals (PGE-gold-silver), with optionality for rapid nickel production re-start

EXPLORATION

- Experienced Sudbury exploration team
- Track record of making significant discoveries in Sudbury
- Utilizing a large proprietary data base to develop targets

SYNERGISTIC ACQUISITIONS

- Track record of acquiring accretive projects in Sudbury
- Targeted acquisitions are non-core to their current owners
- Targeting deposits with synergies to existing mines and infrastructure

SUDBURY – A WORLD CLASS MINING DISTRICT

Vale, Glencore and Magna Mining are the only three companies to have significant property holdings in the Sudbury Basin.

MAGNA MINING'S PRODUCTION PIPELINE

M Pipeline of projects: Magna now has a portfolio of low capex, brownfield or past producing assets that can provide a platform for significant production growth for the next 5 years

M Bootstrapped production plan: Staggered production start-ups and projected low capital costs would allow cash flow to fund significant portions of production growth in a highly capital efficient manner

M Production growth profile is based on current known resources and **could be further augmented by new discoveries**

Current combined M&I resources: 805M lbs of copper, 875M lbs of nickel, 2.7 M oz of total precious metals (Pt + Pd + Au)

All projects have the potential for new discoveries or extensions of the existing resources

MAGNA MINING INC.

SUDBURY'S CANADIAN MINING COMPANY

**TSXV: NICU
OTCQX: MGMNF**

MANAGEMENT

Jason Jessup, MBA – Chief Executive Officer & Director

Jason has over 25 years of experience in the mining industry comprising operations management, corporate development and project evaluation. Formerly FNX Mining, Sandstorm Gold, Premier Royalty, and INCO.

Paul Fowler, CFA – Executive Vice President

Paul is an experienced Mining Executive and has worked with publicly-listed Canadian mining companies for over 20 years. He has extensive experience in Corporate Development, Marketing, M&A, & Capital Raising, and most recently worked in Corporate Development roles for Reunion Gold and Benz Mining.

Jeff Huffman, MBA, PMP – Chief Operating Officer

Jeff is an experienced mining executive with over 20 years in operations management, project management and underground mine building. Jeff most recently served as President & COO of Dumas Contracting Ltd., a well-recognized, international underground mine contracting company. Jeff is a graduate of the Haileybury School of Mines, received his MBA from Athabasca University and is a registered project management professional (PMP).

David King, M.Sc., P.Geo. - Senior Vice President, Exploration & Geoscience

David is a registered professional geologist with more than 25 years of base and precious metal experience, focused on both mining production and exploration. Mr. King most recently served as Vice President, Exploration and Geoscience for TMAC Resources Inc, and prior to that was Senior Manager, Geoscience and Mineral Resources of KGHM International Ltd (previously FNX Mining Company).

Scott Gilbert, CA, CPA, CBV – Chief Financial Officer

Scott has over 25 years of experience in finance roles in the mining sector. He most recently held the position of Chief Financial Officer at Wesdome Gold Mines Ltd., where he was responsible for all accounting functions, reporting, business strategy and risk management. Mr. Gilbert is a Chartered Professional Accountant and holds a Bachelor of Business Administration Degree from Lakehead University with a major in accounting.

Tim Bradburn, JD – Senior Vice President, General Counsel

Tim has 25 years as a corporate, securities and M&A lawyer for publicly traded, exchange-listed companies, including almost 20 years in the mining industry. He was most recently the Senior Vice President, General Counsel and Corporate Secretary for IAMGOLD.

Greg Huffman, B.Sc. – Senior Vice President, Capital Markets

Greg has over 20 years of capital markets experience in the mining sector, spanning positions in institutional mining equity sales, fund management, and mining equity research. Greg holds a B.Sc. in Earth Sciences (Geology) from the Harquail School of Earth Sciences at Laurentian University in Sudbury, Ontario.

DIRECTORS AND STRATEGIC ADVISORS

Vern Baker, P.Eng., MBA Chairman

Vern has +30 years of experience in the mining sector. He was most recently the CEO of Jaguar Mining (TSX: JAG) and previously served as General Manager of Goldcorp's Cerro Negro Mine, as well as VP Operations at FNX Mining, and President of Duluth Metals.

Jonathan Goodman, Director

Jonathan has over 30 years mining investment and operating experience and has built extensive relationships in the global mining resource and finance sectors over a distinguished career. Jonathan held the role of Executive Chairman of DPM Metals (TSX:DPM) from April 2013 to September 2017, at which time he was appointed Chairman, and was its CEO from 1995 to 2013. Mr. Goodman is the President and CEO of Dundee Corporation.

Carl DeLuca, Director

Carl has over 25 years of legal and public company experience. Currently he is the General Counsel and Corporate Secretary for Hemlo Mining (TSXV:HMMC), a Canadian-focused mid-tier gold producer. He previously served as General Counsel and Corporate Secretary of Li-Cycle Holdings and Detour Gold. Carl also previously held various roles at Vale S.A.'s global base metal business, including Head of Legal for North American & U.K. Operations.

John Seaman, ICD.D Director

John is an executive with +22 years experience in the mining industry, from exploration through development and production. He is currently a director of i-80 Gold (TSX:IAU) and was previously the Lead Director of Premier Gold Mines. John served as the CFO of Premier Gold Mines from 2006-2012 and CFO of Wolfden Resources from 2002 to 2007. John currently is President and CEO of a large private security company and is an ICD.D member of the Institute of Corporate Directors.

Shastri Ramnath, MBA, P.Geo, Director

Shastri is the CEO of Exiro Minerals, a private mineral exploration company and the Chair of Orix Geoscience, a geological consulting firm that she co-founded and co-owns. She is a professional geoscientist and entrepreneur with 25 years of global experience and has worked in various technical and leadership roles. Ms. Ramnath spent much of her career in nickel exploration, holding positions at Falconbridge and subsequently at FNX Mining, where she was a key member of the exploration and resource team. Ms. Ramnath was also the CEO of Bridgeport Ventures and is currently a director of Jaguar Mining (TSX:JAG).

Gord Morrison, Advisor

Gord served as President and Chief Technology Officer of TMAC Resources, Chief Technology Officer of KGHM International, and SVP of Exploration for FNX Mining. Prior to FNX Mining, Gord worked 32 years for INCO Ltd. Gord is an acknowledged expert in the exploration of the Sudbury Basin and played a role in numerous discoveries in the region.

McCREEDY WEST – Q4 2025 SUMMARY

Q4 2025 Operating Results

- M** October – December 2025 (“Q4”) was the third full quarter of production from the McCreedy West copper mine under Magna’s operation.
- M** During the quarter 84,953 tons of ore were produced from the 700 Footwall Copper Zone at an average grade¹ of 1.31% copper, 0.23% nickel, 1.05 g/t platinum, 1.10 g/t palladium, 0.45 g/t gold and 15.51 g/t silver, a 13% increase from the 75,173 tons produced during Q3.
- M** Underground development during the quarter totaled 1,688 feet (~18.3 feet per day), in line with expectations. Our development crews are now fully staffed and we no longer are using mining contractors for underground development.
- M** Diamond drilling at McCreedy West during the quarter totaled 29,334 feet, a 91% increase over Q3 as a third diamond drill was mobilized underground in late September.

¹ Grades for ore shipped during Q4 are preliminary in nature and subject to change upon final settlement with Vale’s Clarabelle mill.

McCREEDY WEST 2026 GUIDANCE

2026 McCREEDY WEST OPERATIONAL GUIDANCE		
700 Copper Zone Ore Sales (short tons)	355,000	- 375,000
Copper Equivalent Grade ¹ (% CuEq)	3.2%	- 3.5%
Payable Copper Equivalent Production ¹ (million lbs CuEq)	16.0	- 18.0
Total Cash Cost, excluding stream payments ² (US\$/lb CuEq)	\$3.40	- \$3.80
AISC, excluding stream payments ² (US\$/lb CuEq)	\$4.20	- \$4.70

¹ Copper equivalent payable pounds for the purpose of copper equivalent grade, cash costs and AISC were calculated using the following US dollar prices: \$4.88/lb Cu, \$7.72/lb Ni, \$18.12/lb Co, \$1,410/oz Pt, \$1,156/oz Pd, \$3,815/oz Au, \$50.00/oz Ag, and CAD/USD exchange rate of 1.37.

²The incremental cost impact of the precious metals stream varies significantly based on commodity prices. At the 2026 budget commodity prices outlined above the cost impact is approximately US\$0.78-0.92/lb.

¹ Historical Resources: a qualified person has not done sufficient work to classify the historical resource estimate as a current mineral resource and Magna is not treating the historical resource estimate as a current mineral resource.

² NiEq % = $(Ni\% \times 2204 \times Ni\ Price\ \$/lb) + (Cu\% \times Cu\ Recovery\ \% \times 2204 \times Cu\ Price\ \$/lb) + (Co\% \times Co\ Recovery\ \% \times 2204 \times Co\ Price\ \$/lb) + (Pt\ gpt \times Pt\ Recovery\ \% / 31.1035 \times Pt\ \$/oz) + (dt\ gpt \times Pd\ Recovery\ \% / 31.1035 \times Pd\ \$/oz) + (Au\ gpt \times Au\ Recovery\ \% / 31.1035 \times Au\ \$/oz) / 2204 \times Ni\ \$/lb$. For NiEq, all metals have a recovery applied except Ni, and for CuEq all metals have a recovery applied except Cu.

³ CuEq % = $(Ni\% \times Ni\ Recovery\ \% \times 2204 \times Ni\ Price\ \$/lb) + (Cu\% \times Recovery\ \% \times 2204 \times Cu\ Price\ \$/lb) + (Co\% \times Co\ Recovery\ \% \times 2204 \times Co\ Price\ \$/lb) + (Pt\ gpt \times Pt\ Recovery\ \% / 31.1035 \times Pt\ \$/oz) + (dt\ gpt \times Pd\ Recovery\ \% / 31.1035 \times Pd\ \$/oz) + (Au\ gpt \times Au\ Recovery\ \% / 31.1035 \times Au\ \$/oz) / 2204 \times Ni\ \$/lb$.

⁴ Prices used in Ni Eq and Cu Eq calculations (US): \$7.72/lb Ni, \$4.88/lb Cu, \$18.12/lb Co, \$1,410/oz Pt, \$1,156/oz Pd, \$3,815/oz Au.

NOTES ON McCREEDY WEST RESERVE & RESOURCE ESTIMATES AND HISTORICAL RESOURCES

¹Notes on Mineral Reserves

The effective date of the McCreedy West Mineral Reserve Estimate is December 31, 2025.

Mineral Reserves are in addition to Mineral Resources.

The Mineral Reserve estimate was prepared under the supervision of Mr. William van Breugel, P.Eng., B.A.Sc. Geological Engineering, Associate Engineer of SGS Geological Services and Mr. Henri Gouin, P.Eng., of SGS Geological Services, both are considered a “Qualified Person” as defined by NI 43-101.

Mineral Reserves are based on metal prices of \$7.72/lb Ni, \$4.88/lb Cu, \$18.12/lb Co, \$1,410/oz Pt, \$1,156/oz Pd, \$3,815/oz Au, and \$50/oz Ag. Metal recoveries considered are 85% for Ni, 91% for Cu, 68% for Co, 64% for Pt, 69.5% for Pd, 70.5% for Au, and 70% for Ag and a Cdn/Fx of \$1.37.

A cut-off grade was applied to each stope based on NSR exceeding sustaining development, equipment and fixed plant capital costs and operating costs of \$180.00 per ton.

Stope tons and grades include 3 feet of mining dilution for stopes and 85% stope recoveries.

Figures may not sum exactly due to rounding.

²Notes on Mineral Resources

The effective date of the McCreedy West Mineral Resource Estimate (“MRE”) is December 31, 2025. The MRE is based on drillhole assay data received up to September 10, 2025, which represents the cut-off date for assay data used in the estimate. The estimate has been depleted to account for all production through December 31, 2025.

The Contact Zone Mineral Resource was previously disclosed in 2024 and was estimated by Allan Armitage, Ph.D., P. Geo. of SGS Geological Services and is an independent Qualified Person as defined by NI 43-101. Dr. Armitage conducted two site visits to the McCreedy Property Mine, on August 22-23, 2023 (surface tour) and July 24, 2024. Mined material from 2024 was depleted from the previous MRE.

The Footwall Zone Mineral Resource was estimated by Jonathan Cirelli, P. Geo. of Orix Geoscience Inc. and is an independent Qualified Person as defined by NI 43-101. Mr. Cirelli was previously employed at McCreedy West Mine during 2010-2011. A site visit was last conducted on November 20, 2025. The Footwall Zone Mineral Resource has been reviewed by Mr. Armitage.

The Contact Zone Mineral Resource was previously disclosed in 2024 and was estimated by Allan Armitage, Ph.D., P. Geo. of SGS Geological Services and is an independent Qualified Person as defined by NI 43-101. Dr. Armitage conducted two site visits to the McCreedy Property Mine, on August 22-23, 2023 (surface tour) and July 24, 2024. Mined material from 2024 was depleted from the previous MRE.

The Mineral Resource is presented undiluted and in situ, constrained by diamond drillhole information and underground geological mapping, and is considered to have reasonable prospects for eventual economic extraction. Mineral Resources are exclusive of Mineral Reserves and mined-out material.

Mineral Resources are classified in accordance with the 2014 CIM Definition Standards for Mineral Resources and Mineral Reserves.

Mineral Resources, which are not Mineral Reserves have not demonstrated economic viability. An Inferred Mineral Resource has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. There is no certainty that Inferred Mineral Resources will be converted to Indicated Mineral Resources through continued exploration.

All figures are rounded to reflect the relative accuracy of the estimate and numbers may not add due to rounding.

The Footwall Zone cut-off grade of 2.0% CuEq considers metal prices of \$7.72/lb Ni, \$4.88/lb Cu, \$18.12/lb Co, \$1,410/oz Pt, \$1,156/oz Pd, \$3,815/oz Au, and \$50/oz Ag. Metal recoveries considered are 85% for Ni, 91% for Cu, 68% for Co, 64% for Pt, 69.5% for Pd, 70.5% for Au, and 70% for Ag.

The Contact Zone cut-off grade of 1.1% NiEq considers metal prices of \$8.50/lb Ni, \$3.75/lb Cu, \$17.00/lb Co, \$950/oz Pt, \$1,100/oz Pd and \$1,950/oz Au. Metal recoveries considered are 78% for Ni, 95.5% for Cu, 56% for Co, 69.2% for Pt, 68% for Pd and 67.7% for Au. Silver was not considered in the Contact Zone cut-off grade.

Footwall Zone grades for Ni, Cu, Co, Pt, Pd, Au, and Ag are estimated using ~5.0 ft (1.52 m) composites assigned to that domain. To generate grade within the blocks, the inverse distance squared (ID2) interpolation method was used. Samples were capped before compositing when required. A density regression was calculated and used to populate density values in the model.

Contact Zone grades for Ni, Cu, Co, Pt, Pd, Au, and Ag are estimated using ~5.0 ft (1.52 m) capped composites assigned to that domain. To generate grade within the blocks, the inverse distance squared (ID2) interpolation method was used for all domains. Average density values were assigned based on a database of 45,525 samples.

The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.

Historical Resource Estimate Notes:

An MRE for the Podolsky Mine and Kirkwood Mine has been completed internally by KGHM International and is summarized on the slide titled “Historical Resources”. The MRE for the Podolsky Mine and Kirkwood Mine is considered historical in nature. Although the resource estimate has been prepared and disclosed in compliance with all current disclosure requirements for mineral resources or reserves set out in the NI 43-101 Standards of Disclosure for Mineral Projects and the classification of the historical resource as a Measured, Indicated and Inferred resource is consistent with current 2014 CIM Definition Standards - For Mineral Resources and Mineral Reserves, a qualified person has not done sufficient work to classify the historical resource estimate as a current mineral resource and Magna is not treating the historical resource estimate as a current mineral resource.

NOTES ON LEVACK RESOURCE ESTIMATE

Levack Mineral Resource Estimate Notes:

1. The effective date of the Levack Mine Mineral Resource Estimate (MRE) is August 31, 2025. This is the close out date for the final mineral resource models and mine out models (as-builts).
2. The mineral resources are reported at a cut-off grade of 2.00% CuEq for Contact deposits and 2.50% CuEq for Footwall deposits. Values in this table reported above and below the cut-off grades should not be misconstrued with a Mineral Resource Statement. The values are only presented to show the sensitivity of the block model estimates to the selection of cut-off grade.
3. CuEq is calculated using metal prices of \$4.50/lb Cu, \$7.31/lb Ni, \$15.00/lb Co, \$1,291/oz Pt, \$1,031/oz Pd, \$3,324/oz Au, and \$37.40/oz Ag. Metal recoveries considered are 91% for Cu, 85% for Ni, 68% for Co, 64% for Pt, 69.5% for Pd, 70.5% for Au, and 70% for Ag.
4. The mineral resource was estimated by Jonathan Cirelli, P. Geo. of Orix Geoscience Inc. and is an independent Qualified Person as defined by NI 43-101. A site visit was conducted on July 9th, 2025.
5. The classification of the current Mineral Resource Estimate (MRE) into Indicated and Inferred mineral resources is consistent with current 2014 CIM Definition Standards - For Mineral Resources and Mineral Reserves.
6. All figures are rounded to reflect the relative accuracy of the estimate and numbers may not add due to rounding.
7. The mineral resources are presented undiluted and in situ, constrained by diamond drillhole information and previous underground geological mapping, and are considered to have reasonable prospects for eventual economic extraction. The mineral resource is exclusive of mined out material. The drillhole database includes data from 10,525 surface and underground diamond drill holes completed between 1911 and 2025. The drilling totals 4,382,756 ft (1,335,864 m) including 341,394 assay intervals representing 1,393,512 ft (424,742 m) of data.
8. Mineral resources which are not mineral reserves do not have demonstrated economic viability. An Inferred Mineral Resource has a lower level of confidence than that applying to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that most Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration.
9. Grades for Ni, Cu, Co, Pt, Pd, Au, and Ag are estimated for each mineralization domain using ~2.0 ft (0.61 m), 2.5 ft (0.76 m), or 5.0 ft (1.52 m) composites assigned to that domain, depending on the style of mineralization. To generate grade within the blocks, the inverse distance squared (ID2) interpolation method was used for all domains. Samples were capped before compositing when required.
10. Reliable density measurements were available for 21% of the samples in the drillhole database (71,712 measured samples) allowing for zone-specific Ni and Cu-based regression formulas to be created and applied to estimate missing densities.
